“Certificate of Compliance of Cabka NV leper products to the EC Directives concerning plastic articles intended to come into direct contact with foodstuffs”

Introduction

Below is an overview of the most important standards and guidelines that apply to the use and production of pallets.

Producer: CABKA nv
Rozendaalstraat, 101,
B – 8900 leper
VAT n°:BE 0430184706

1. Food contact

1.1 Following articles are covered by this Declaration of Compliance

Pallets and Boxes in PP or HDPE in virgin material
In sizes and versions as described in the Cabka technical leaflets
Including Antislip Tape and grommets
Products: Hygienic Pallets 1200x1000 and 1200x800
Endur pallets
Eco pallets
Pallet boxes

1.2 All concerned articles meet the relevant requirements of following documents:

- The general directive 1935/2004 EC and her amendment 2023/2006 (see latest consolidated version in table 1.)
- The old plastic directive 90/128EC and all her amendments.
- The plastic directive 2011/10 EC harmonizing the 2002/72 EC with all her amendments : 2004/1-EC, 2004/19-EC, 2005/79-EC, 2007/19-EC, 2008/39-EC, 2011/1282-EC, 2012/1183-EC, 2014/202-EC, 2015/174-EC, 2019/37-EC
- 2006 (see latest consolidated version in table 1.)

These articles are made of virgin PP or HDPE and additives, all full filling the requirements of the directives, with respect, to the presence on the lists of accepted substances of above mentioned directives, and confirmed by the suppliers of the raw materials. (*cfr MSDS files of material suppliers*)

- Cabka products are made from positive list materials
- Migration tests global (GMT) and specific (SMT) migration tests.

1.3 Intended use of the articles:

The articles can be used in contact with food at temperatures up to 40°C

Food stuffs: dry food, aqueous food, acidic food, alcoholic food and fatty food.

The Container Boxes are mainly used to store fresh dry vegetables, potatoes etc...

In this case, no migration test is required, according to the directives.

Nevertheless, total migration tests are conducted.

1.4 Migration tests:

The total migration tests are carried out in following conditions, on a regular base: (2023 : from 16/12/2022 till 19/01/2023).

Table 1 : selected simulants and test conditions

Used Similants	Test conditions
Simulant A: 10% (v/v) ethanol	10 days at 40°C (OM2)
Simulant B : 3% acetec acid (m/v)	
Simulant D2 : ethanol 95% (v/v) instead of vegetable oil	
Simulant D2: isooctane instead of vegetable oil	2days at 20°C
Simulant E: Tenax® (modified polyphenylene oxide)	10 days at 40°C

Results of total migration tests:

Total migration < 10 mg/ dm² (full fills requirement)

All types of foodstuffs at long term contact at room temperature or below are possible.

The testing for specific migration is not applicable as according to the SML lists none of the additives needs SML tests.

1.5 Case of Pallets, Boxes and Lids in recycled PP or HDPE :

These products are manufactured using generally food grade, but recycled materials. As there is always an uncontrollable factor, it is not possible to certify their conformity to the above mentioned directives. The use of recycled plastics is governed by the new directive 282/2008 EC . (see latest consolidated version in table 1.)

A risk analysis document has been made by Cabka NV Ieper. The conclusion is that the Cabka NV Ieper recycled products can be safely used without restriction in the case of packed food, and for direct food contact in the case of dry food.

2. *Packaging directive*

The pallets, boxes and lid comply with the European packaging directive 94/62/EC this means, among other things, that the total concentrations of lead, cadmium, mercury and hexavalent chromium in packaging and packaging components do not exceed 100 ppm weight.

Prime material: see MSDS chips suppliers

Recycled material: certificates suppliers or internal controle in lab (cfr XRF analyses).

3. *Directive 2009/48/EC*

Directive on the safety of toys:

Relates to absence of

- Heavy metal
- Plasticizers (DEHP, ...)

- Bisphenol A

Is covered by using prime materials, of which certificates are made available by suppliers.

4. REACH (Regulation (EC) No 1907/2006)

Materials used comply with the REACH directive: notification obligation at concentrations >1000mg/kg ([annex 14](#)); + specific requirements from restricted list ([annex 17](#)).

List updated 2 times a year: (See table 1).

5. Use of Production Scrap (post industrial) / Post Consumer

- The use of such materials supports sustainability.
- Use of such materials depends on the applications:
 - Used in the applications where the use is permitted.
 - Sometimes other criteria have to be chosen: where food safety is important, the use of recycled materials will usually not be possible.

Regulation	Current validation version
1935/2004/EC	27/03/2021
2023/2006/EC	17/04/2008
10/2011/EC	23/09/2020
2002/72 /EC	23/09/2021
282/2008/EC	26/10/2015
94/62/EC	04/07/2018
REACH 1907/2006/EC	17/12/2022
2009/48/EC	05/07/2022

Table 1.

Sustainability at Cabka

It is important for sustainability within Cabka that emphasis is placed on the fact that **recycled material is used where possible and that the products are recyclable again.**

Cabka has a ECOVADIS certificate at group level.

→ Cabka products do not fall under the most acute problems (see, among other things, plasticizers orthophthalates in PVC, ...)

→ Heavy metals and such are monitored.

Kind regards,
For Cabka NV

Martin Braekevelt
